

Grace Chang

Kirkland, WA · 224-201-8256 · chag60460@gmail.com · Portfolio: chag60460.github.io/grace-portfolio

Designer who builds. I work from first sketch to shipped pixels, shaping how people discover, personalize, and enjoy the software they use every day. HCI training at MIT, now designing Windows experiences for millions of devices and prototyping in code to test ideas.

PRODUCT DESIGN EXPERIENCE

Interface Software Engineer · [Microsoft](#) Aug 2023 to Present

- Led end to end redesign of Windows Privacy Settings to refine how users discover and tune their privacy controls in settings through a restructured permission architecture, grounded in CSAT verbatims and behavioral telemetry across 4M+ monthly active devices, partnering closely with designers and PMs to lift feature discoverability 10% and cut perceived load time by 1.57s.
- Designed and built a scalable custom UI component library to replace fragmented implementations across 35+ complex, data-driven interfaces, cutting rendering time by 33% and establishing a consistent design system that raised craftsmanship across surfaces.
- Pioneered an LLM-powered developer experience platform that turns dense engineering knowledge into interactive AI workflows through MCP tool orchestration, reducing new-hire onboarding friction by 87.5%.
- Optimized infrastructure serving 40B+ daily requests, improving P99.9 latency up to 250% through architectural changes, synchronization work, and real-time rendering performance analysis that directly informed frontend responsiveness.

PROTOTYPING & RESEARCH EXPERIENCE

Interaction Design Researcher · [MIT Media Lab](#), [Tangible Media Group](#) Sep 2022 to May 2023

- Designed [Sonic Stitches](#), a tangible telepresence concept about feeling someone's presence from far away. Mapped user flows and journey maps to frame the interaction, took it from sketch to working prototype with conductive embroidery and gesture-driven sound, and ran usability testing with remote pairs to refine the feedback model.

Product Designer · [MIT Media Lab](#), [Personal Robots Group](#) Mar 2022 to Jun 2022

- Ran 12 moderated sessions that surfaced gaps in the parent and child interaction paradigm, reframed the flow around the Jibo storybook station's graphic panels, and designed the social robot's personality and interaction behavior across character motion, haptics, and conversation, increasing children's focus time 30%.

Interaction Designer · [MIT Media Lab](#), [Fluid Interfaces Group](#) Oct 2021 to Mar 2022

- Designed [Expressive Navigation](#), an affect-aware iOS experience that reads facial cues and gives clinicians feedback in the moment. Ran user research with therapists to frame the problem, translated findings into wireframes and user flows, and shipped a high-fidelity prototype that keeps every bit of processing private on device.

Design Prototyper · [MIT Climate & Sustainability Consortium](#) Jun 2021 to Oct 2021

- Designed an immersive VR driving experience in Unity that made an autonomous car's braking, turning, and lane-change intent legible through spatial motion cues. An exercise in explaining a system's reasoning to people without using words.

SELECTED PROJECTS

[Magdalene X²](#), [Multi-Agent Health Companion App](#)

- Designed an AI health companion that turns labs, cycle, nutrition, fitness, and sleep into one legible story, owning problem framing, information architecture, visual system, and interaction model.
- Created high fidelity mockup and prototyped interactive experience in code, refining through successive rounds of real user feedback, focusing the interface on cross-domain insights.

[Fritter](#), [Social Feed Case Study](#)

- Redesigned a social feed around user control after conducting user research which surfaced opaque algorithmic curation was driving echo chambers and compulsive scrolling.
- Diverged six concepts and converged on three, survey-driven feed curation, message-based rewards, and self-set time limits, then wireframed the flows in [Figma](#) and carried the design through peer critique into a shipped frontend and backend.

[Dispatcher Voice Agent](#), [Conversational AI Freight Dispatching](#)

- Designed the conversation flows, failure states, and handoff moments for an AI voice agent coordinating about 2,000 carriers and 500 loads a week.
- Prototyped voice agent user interactions and iterated on user feedback to refine freight to dispatcher AI workflow.

SKILLS

DESIGN	Visual Design, Interaction Design, Design Systems, Information Architecture, Typography & Layout, Systems Thinking, Motion, Storytelling & Design Narrative, Accessibility (WCAG)
RESEARCH	Usability Testing, A/B Testing, User Interviews, Persona Development, User Flows
PROTOTYPING	Figma, Framer, Cursor, Unity, TouchDesigner, Arduino, Adobe CC, Blend, Wireframing
TECHNICAL	Python, React, TypeScript, C++, C#, JavaScript, Vue, Node.js, Flask, Git, HTML, CSS, Swift, Docker, Kubernetes

EDUCATION

[Bachelor of Arts in Computer Science \(Dual Enrollment\)](#), [HCI Concentration](#) May 2023

[Massachusetts Institute of Technology](#) · [Cambridge, MA](#)

Tangible User Interface · Artificial Intelligence · Software Construction · Software Studio · Data Structures and Algorithms

[Wellesley College](#) · [Wellesley, MA](#)

Human Computer Interaction · Databases with Web Interface
